EDUCATION

University at Buffalo – B.S. Computer Science

Anticipated Dec 2025

Relevant Coursework:

Algorithms and Complexity	Data Structures	Object Oriented Programming	Discrete Structures
Computer Architecture	Systems Programming	Modern Networking Concepts	Software Engineering
Technology Entrepreneurship	Probability Theory	Machine Learning	Web Applications

TECHNICAL SKILL

Languages: Python, Java, Javascript, C++, C, Scala, Golang, Typescript, PHP

Frameworks, Libraries, & Tools: React, Angular, Node.js, Express, Django, Bootstrap, Mocha, Jasmine, JWT, IntelliJ, VS Code, GitHub, Docker, PuTTY, WinSCP, DBeaver, GNU-Make, Snyk, Nginx

Clouds, APIs & Databases: AWS S3, GCP, MongoDB, PostgreSQL, MySQL, EHR/FHIR, Nominatim, Google Maps, PayPal

WORK EXPERIENCE

ScriptChain Health

June 2025 - August 2025

Software Engineer Intern

Tech Stack: Angular, TypeScript, Nodejs, Express, Django, Bootstrap, DBeaver, EHR APIs, Snyk, Mocha, Jasmine

- Resolved **application vulnerabilities**, including cryptographic flaws, rate-limiting issues, and insecure dependencies via snyk.
- Built responsive, accessible UI components with **Angular & Bootstrap**, collaborating with Product Designer to meet user needs.
- Developed secure **RESTful APIs integrating RBAC and FHIR**, ensuring HIPAA-compliant encryption in rest and transit.
- Implemented unit and integration tests with **Mocha** and **Jasmine** to validate core frontend and backend functionality.

Lee's Market

December 2024 - May 2025

Full-Stack Developer Intern

Tech Stack: AWS S3, React, React Bootstrap, PostgreSQL, Express, Node.js, JWT, Docker, PuTTY

- Designed a **responsive front-end user interface** adapting multiple screen sizes using **React** and **Bootstrap** libraries.
- Implemented user creation and authentication using **hashing, salting, and XSRF protection** with PostgreSQL, Express, JWT, and PuTTY for secure remote database access.
- Collaborated with UX Designer and Product Manager to implement features aligning with customer needs and preferences.
- Architected **RESTful API endpoints** and containerized app & database through docker for scalable deployment.

PROJECTS

Margn

August - December 2025

Tech Stack: PHP, React, Javascript, SQL, Scrum, OpenLibrary

- Developed an open-book rating and review platform similar to Letterboxd, leveraging the **Open Library API** to fetch book data and **caching** for fast, **scalable** content delivery.
- Built real-time rating, review, following, and community systems using **PHP, SQL, and React** for dynamic user interaction.
- Collaborated closely with a team of developers, coordinating frequently on **product design, usability, and overall user experience**.

Tree Health Classifier

August - December 2025

Tech Stack: Python, Docker, Spark, Hadoop, Jupyter Notebook, Matplotlib, Random Forest

- Cleaned and analyzed** Buffalo tree datasets, using **EDAs** to detect outliers, duplicates, and missing values.
- Developed a machine learning pipeline with **Random Forest** to classify tree health based on attributes such as **DBH or Tree Height**.
- Optimized actionable maintenance by identifying at-risk trees to **maximize ecological productivity**.

Student Meal Delivery Platform

February - May 2025

Tech Stack: PHP, HTML, CSS, Javascript, winsep, SQL, Nominatim, Paypal and Google Maps API, Scrum

- Built a food delivery platform integrating **Google Maps and Nominatim** to display businesses within a 10-mile radius.
- Integrated user transaction handling using **PHP, SQL, and PayPal's REST API** for secure payment processing.
- Collaborated with a team and project manager using **Scrum boards and Agile protocol** to streamline project management.

Interactive Web Platform

October - December 2024

Tech Stack: Python, HTML, CSS, Javascript, MongoDB, Docker, Django

- Created an interactive web application with secure user login and registration, using hashing, salting, and XSRF tokens.
- Developed different forms of a real-time chat feature with injection security using **WebRTC, WebSockets, and AJAX polling**.
- Implemented multimedia uploads, leveraging **TCP buffering, multipart parsing, and byte signature decoding**.
